

MasterCard Head Office, St Leonards

Case Study

To provide a completely hands-free experience for their staff and visitors when using the bathrooms at their Australian headquarters in St Leonards, MasterCard engaged record Automatic Doors to upgrade 22 of their male, female and accessible bathroom entry doors with DFA 127 automatic swing door operators, activated by touchless door controls or radar activation sensors.

Record undertook a full assessment of each entrance to determine a suitable mounting location for the operators with some needing to be mounted inside the ceiling area, with suitable access panels for future servicing requirements, with others needing to be mounted to visible structure within the hallway area.

For the accessible bathrooms record also installed electric locking and its accessible privacy kit system with indicator lights and touchless door controls.
